OX212

MindState
Prediction System

Your worst trade doesn't start in the market

It starts after the first loss. When you want it back. When you size up without a plan

7% Of traders at ten prop firms (300,000+ accounts), only 7% ever got a payout

74–89% of retail CFD accounts lose money

+16% more likely to take extra risk in the afternoon, for professionals who lose in the morning

Sources: FPFX Technologies, 2024 · ESMA, 2018 · Coval and Shumway, *Journal of Finance*, 2005

OX212

Every chart has two lines

One is the market, and the whole industry works to predict it. The other is the trader, and that's the one that decides whether the account survives

Journals look back

Coaches arrive later

Firms watch the trader like a suspect

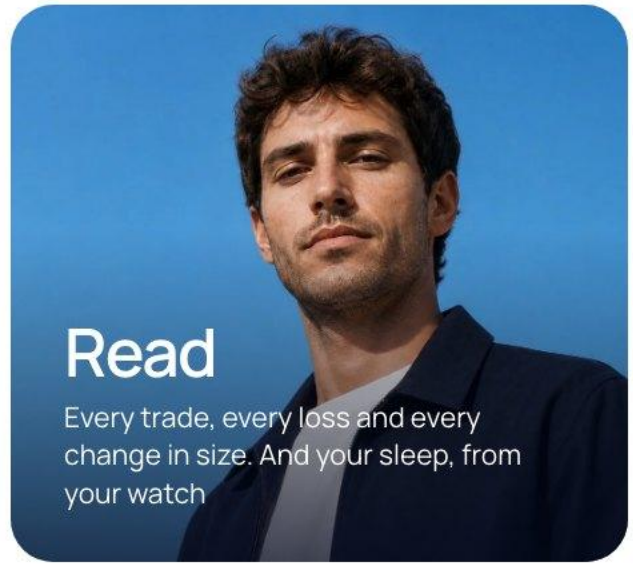

The loss happens in seconds

We don’t predict
the market.
We predict
the trader
OX212 reads your behavior while you trade, sees the
breach of your plan coming and protects your
account before the damage compounds
OX212
MindState
Prediction System

How it works

Read, anticipate, protect and prove

Read

Every trade, every loss and every change in size. And your sleep, from your watch

Next risk

5 of 7 times

Sizing up to win it back

Anticipate

The sequence that repeats before your worst sessions

Account paused

29:41

Orders cancelled · Position closed

Protect

When you're about to break your plan, it pauses the account

Prove

Every decision, with its proof sealed in Bitcoin

OX212

This is OX

The behavioral intelligence on top of all of OX212. It brings together your trading, your rules, your sleep and your sealed history, predicts your next risk and tells you before it happens

Reads you while you trade
Every trade, every session

Knows your rules
The ones you set with a cool head

Knows how you slept
And how you show up to the session

Sees your next risk coming
Before the next order

Warns you before it happens
In writing, plus your OX Briefing

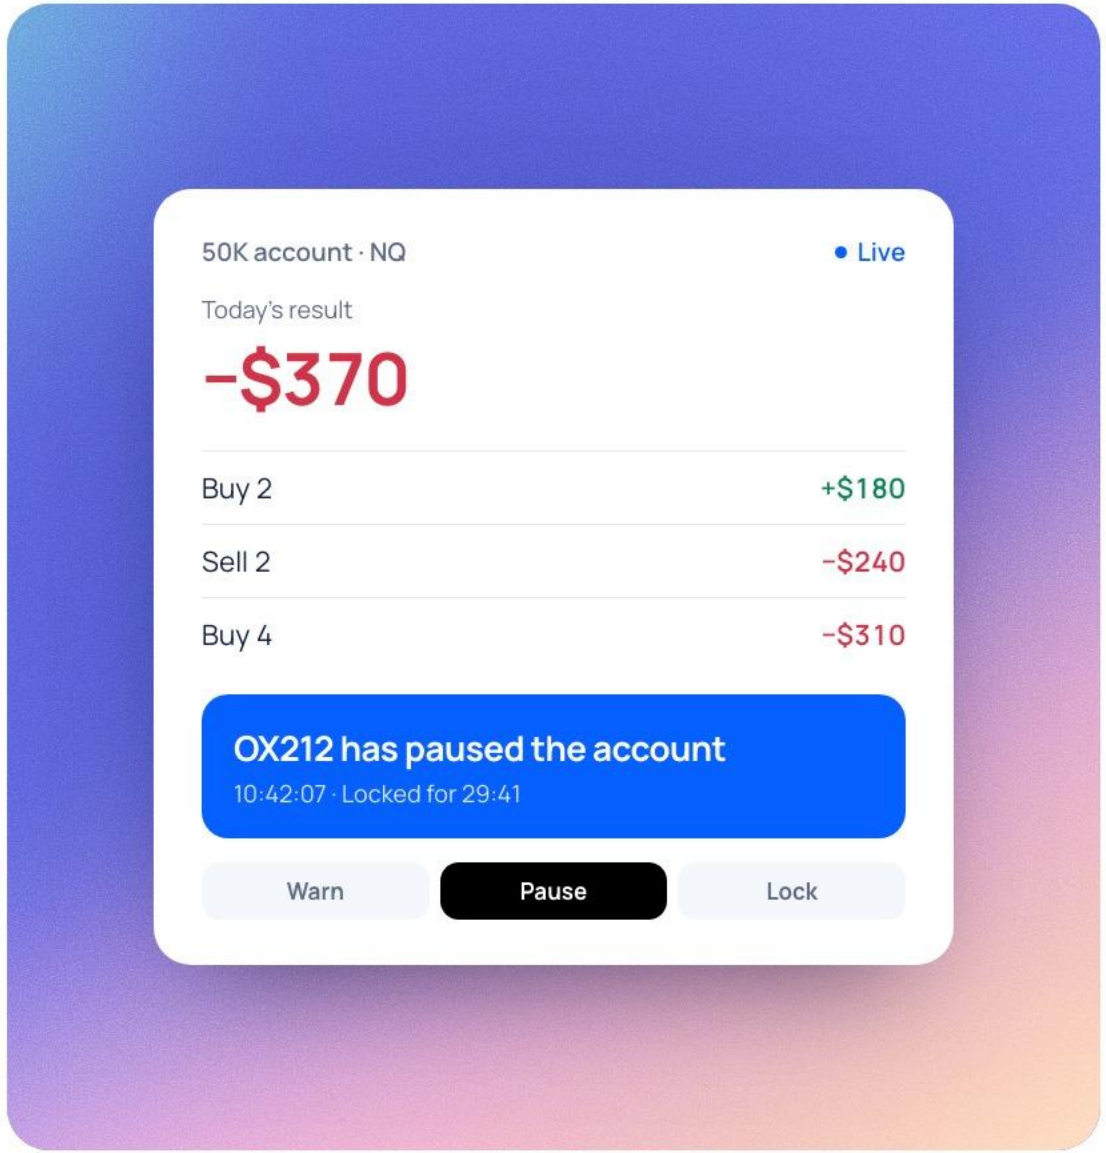

Also from **ChatGPT** **Claude** **Claude Code** **Cursor** From the Pro plan: ask them how you're doing. They read your OX212, read-only

OX212

When your plan is about to break, OX212 acts

10:31	**First loss**	OX212 reminds you of your rule: base size on the next one
10:42	**Second loss in a row**	Your two-losses rule kicks in
10:42:07	**Pause**	It cancels orders, closes the position and pauses the account. No click
30 min	**Lock**	Any new order is voided automatically

With your permission. You set the rules, with a cool head

Illustrative example with simulated data

OX212

Written before. Sealed every hour

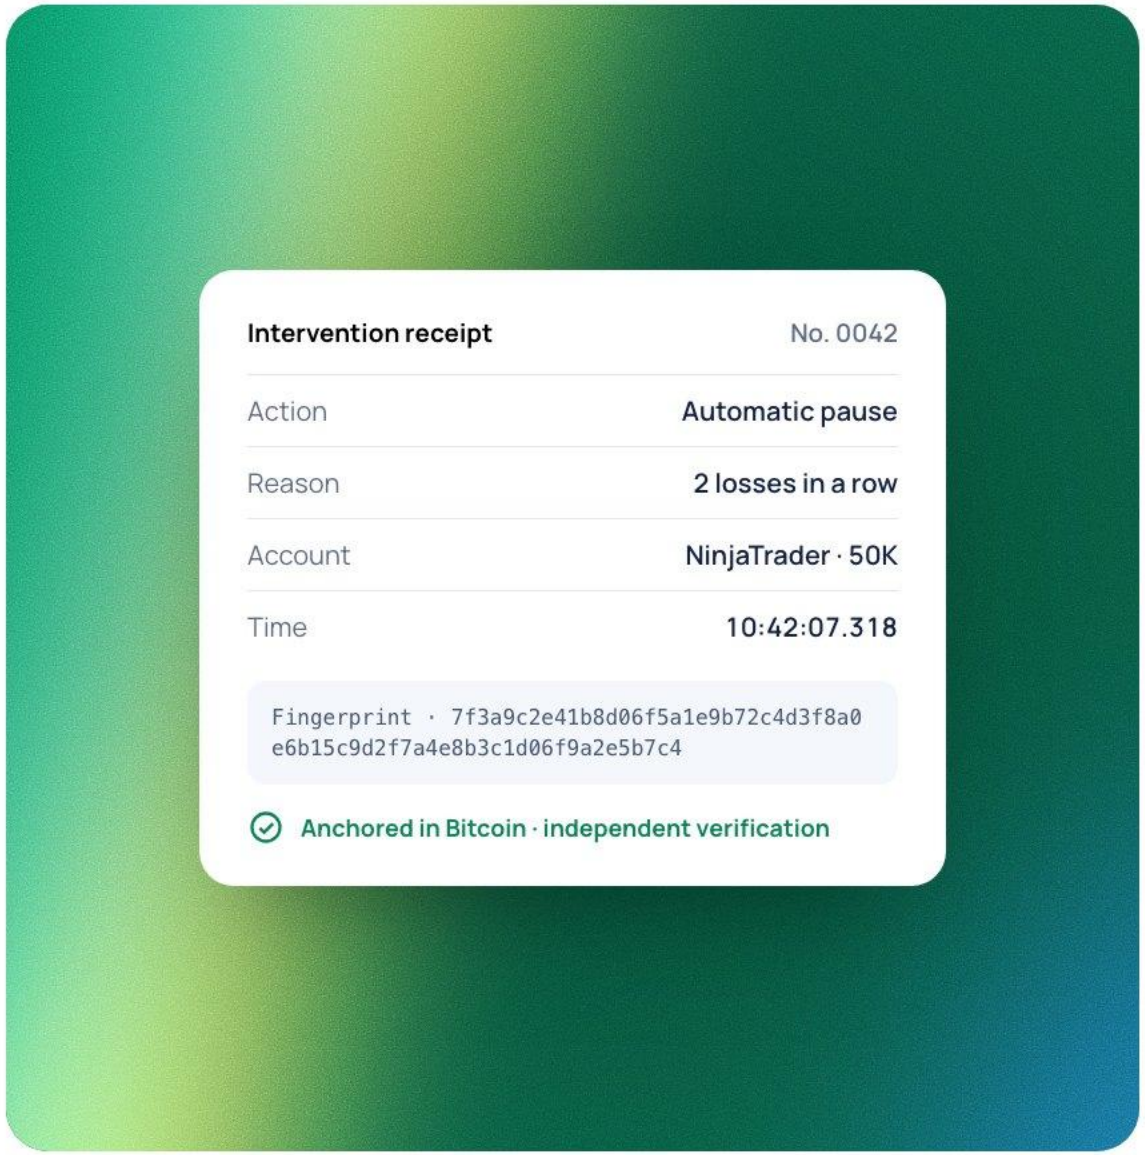

Every prediction and every pause is sealed in Bitcoin. Anyone can check it with independent verification, like an audit

1
OX212 writes the prediction

2
Every hour, it's sealed in Bitcoin

3
Anyone can check it

Discipline Passport. With that sealed record, a trader can show it to any prop firm they choose, as a verified track record

OX212

Three ways to earn, from the same reading

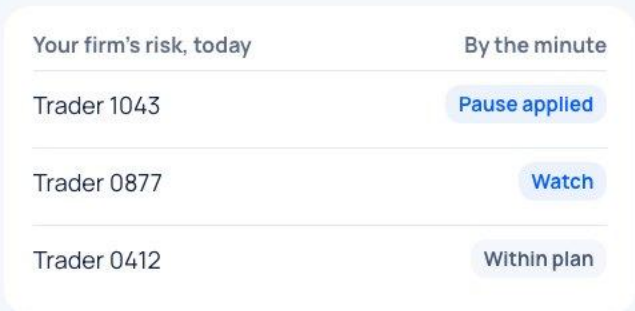

Traders

Monthly or annual, with two months free. 14-day money-back guarantee

Prop firms and brokers

The risk of all their traders in one panel, the API, and signed evidence for compliance

AI agents

They ask OX212 before every order and pay per query on the spot in USDC, with x402

```
GET /v1/risk/trader
402 pay per query · USDC
200 reduce size
```

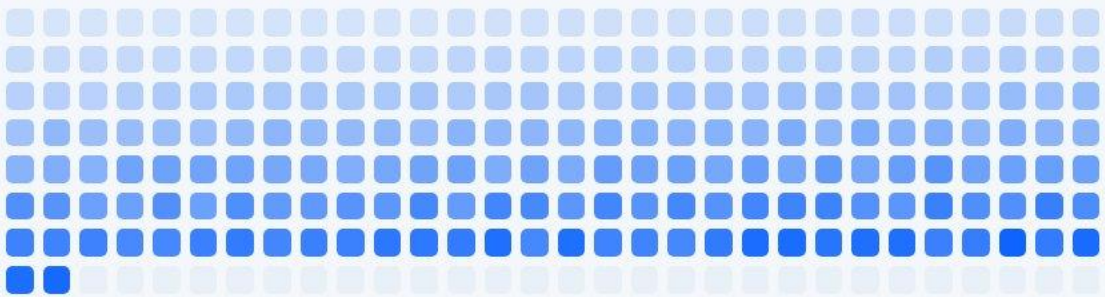

$422M in 2025 revenue for a single prop firm, FTMO

Source: FX News Group, 2026 · OX212 prices in the US, before tax

OX212

The more it's used, the better it reads

Every session adds to a sealed behavioral history. Predictions improve with it, and a sealed past can't be copied

Session 1 — Each square, one sealed session — Session 212

Why now

Millions of funded accounts
With strict rules, lost in one bad day

Your watch already measures your sleep
The body joins the reading

AI agents already trade on their own
And they need brakes too

Traders with more intense emotional reactions to gains and losses performed worse (Lo, Repin and Steenbarger, MIT, 2005)
